Understanding Research Methods for Evidence-Based Practice (EBP) in Health, 1st Edition
Business Law, 4th Edition

Greenhalgh | Bidewell | Crisp | Lambros | Warland

From heavyweight health author Trisha Greenhalgh and an all-star team of Australian contributors, this first edition is the only resource tailored specifically to align with the most common topics in a 12-week evidence-based practice unit for Nursing and Allied Health courses.

Comprising insightful and engaging content, this resource is unique in its focus on consumers of research – keeping students focused on the skills most relevant to them.

What problems are we helping to solve?

- Most of these units prescribe resources which do not actually cover what they do in a 12-week semester and must supplement or omit topics as they go along
- Most resources aim their content at consumers and producers of research
- Currently, students of these units are required to use either cumbersome and difficult texts or use resources which are oversimplified and still do not cover what is needed

How are we addressing these needs?

**Aligned Content**
Unlike many existing evidence-based practice resources, this first edition is designed specifically to align with the most common topics in a 12-week evidence-based practice unit in undergraduate Nursing and Allied Health courses.

**Accessible Content**
Comprising of insightful and engaging content delivered in concise, digestible chunks to support students’ engagement and retention.

**Focus on Consumers**
Greenhalgh’s first edition is focused on consumers rather than producers of research, to keep students focused on the skills most relevant to them, such as synthesizing secondary research for clinical practice.

**Trusted Authorship**
Know you’re getting the best content from leading health author Trisha Greenhalgh and a team of renowned Australian authors.
